DETAILED ACTION

In response to the decision on appeal (paper #17—mailed Mar. 30, 2004), 1. prosecution on claims 14-16 is closed. Claims 14-16 are considered withdrawn. An action on claims 1-13 follows.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by 3. Punte (US 2,327,455).

Punte teaches a crown closure comprising a shell having a top, a curved portion (13), a liner (12) and a skirt (10). The skirt has a plurality of serrations (11) as shown in the figures. The curve portion (13) is "adapted to be the same shape" as the mouth of the bottle (14). See page 2, left column, lines 20-29.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 3727

5. Claims 2-6 and 8-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Punte (US 2,327,455) in view of Leenaards (US 3,827,594).

Punte discloses the claimed invention except for the radius of the curved portion being about 4 mm, the shell blank having a diameter of about 35.5 mm and the shell having 20 serrations. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the crown closure with the radius of the curved portion being about 4 mm, the shell blank having a diameter of about 35.5 mm and the shell having 20 serrations, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Punte discloses the claimed invention except for the radius of the curved portion being about 4 mm, the shell blank having a diameter of about 35.5 mm and the shell having 20 serrations. It would have been an obvious matter of design choice to make the crown closure with the radius of the curved portion being about 4 mm, the shell blank having a diameter of about 35.5 mm and the shell having 20 serrations, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955).

Leenaards teaches a similar crown closure with a radius of a curved portion between the top and skirt being 2 to 5 mm, the diameter of the shell of the crown closure being 20 to 40 mm and the skirt of the crown closure having 21 serrations for a 25 mm diameter crown closure. As Leenaards teaches that these dimensions are

Art Unit: 3727

known in the crown closure art, it would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize these dimensions to make the crown closure of Punte.

6. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Punte (US 2,327,455) in view of Ferngren (US 2,099,056).

Punte teaches everything except for the bottle mouth having an upper and lower portion with a fulcrum therebetween.

Ferngren teaches a similar bottle and closure wherein the bottle mouth has an upper and lower portion with a fulcrum therebetween. See figure 1. This arrangement improves the seal between the closure and bottle neck. See page 2, right column, lines 5-17. It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the bottle neck of Punte with an upper portion and lower portion with a fulcrum therebetween as taught by Ferngren to improve the seal between the closure and bottle.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathan J. Newhouse whose telephone number is (703)-308-4158. The examiner can normally be reached on Monday-Thursday, 6:00 to 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee W. Young can be reached on (703)-308-2572. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
